

# The Rain Forest

By Abby

I read a book about the rain forest. The rain forest is named after all the rain it gets.

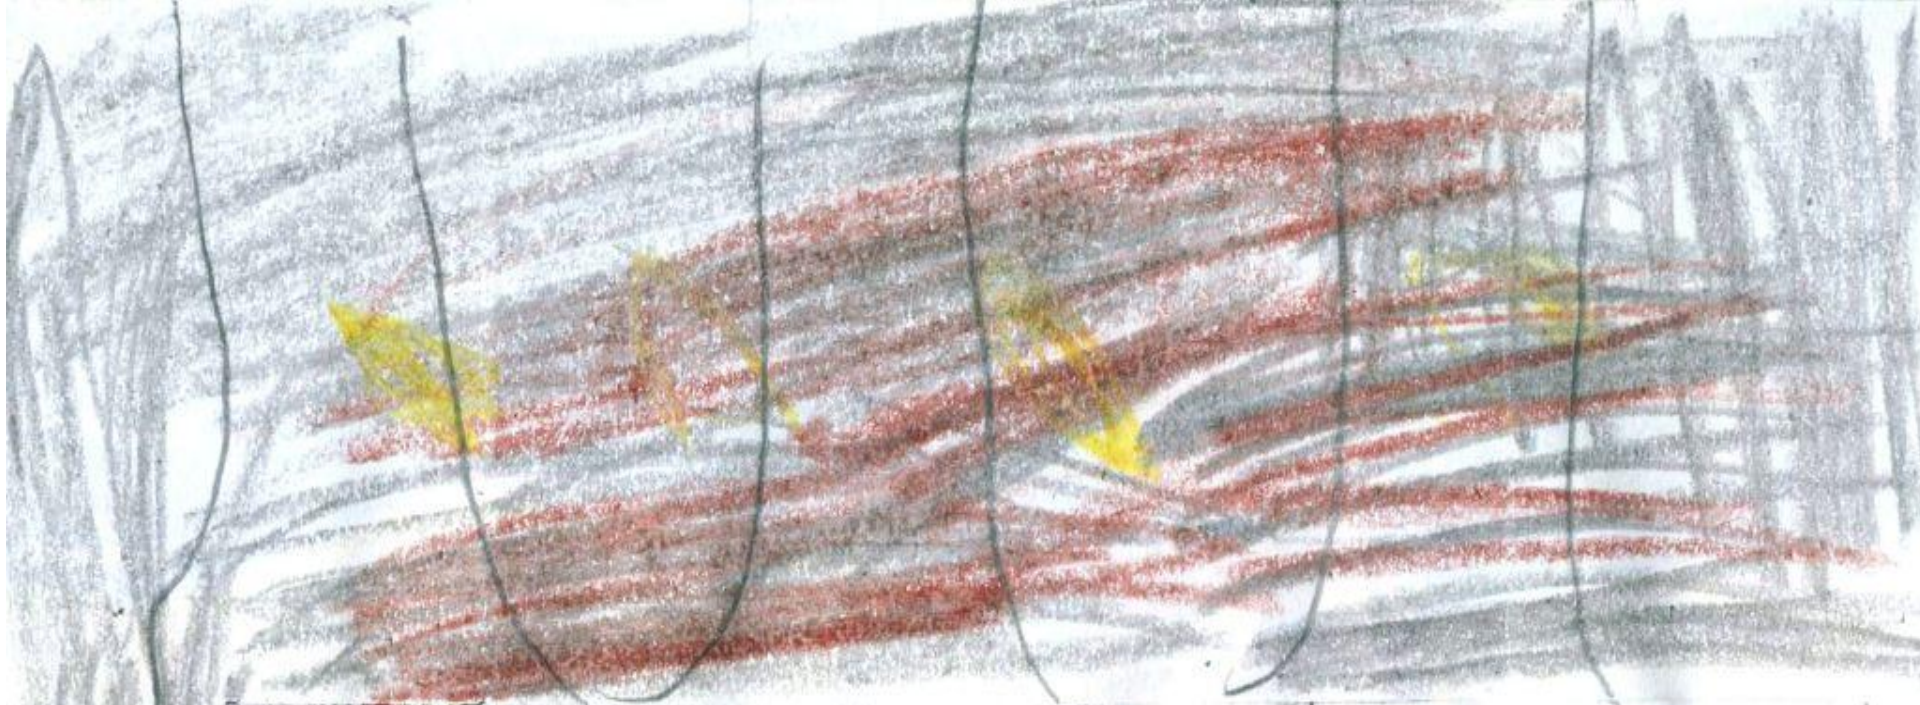

Many plants grow in the rain forest. A couple of plants in the rain forest get a lot of sunlight. Some do not.

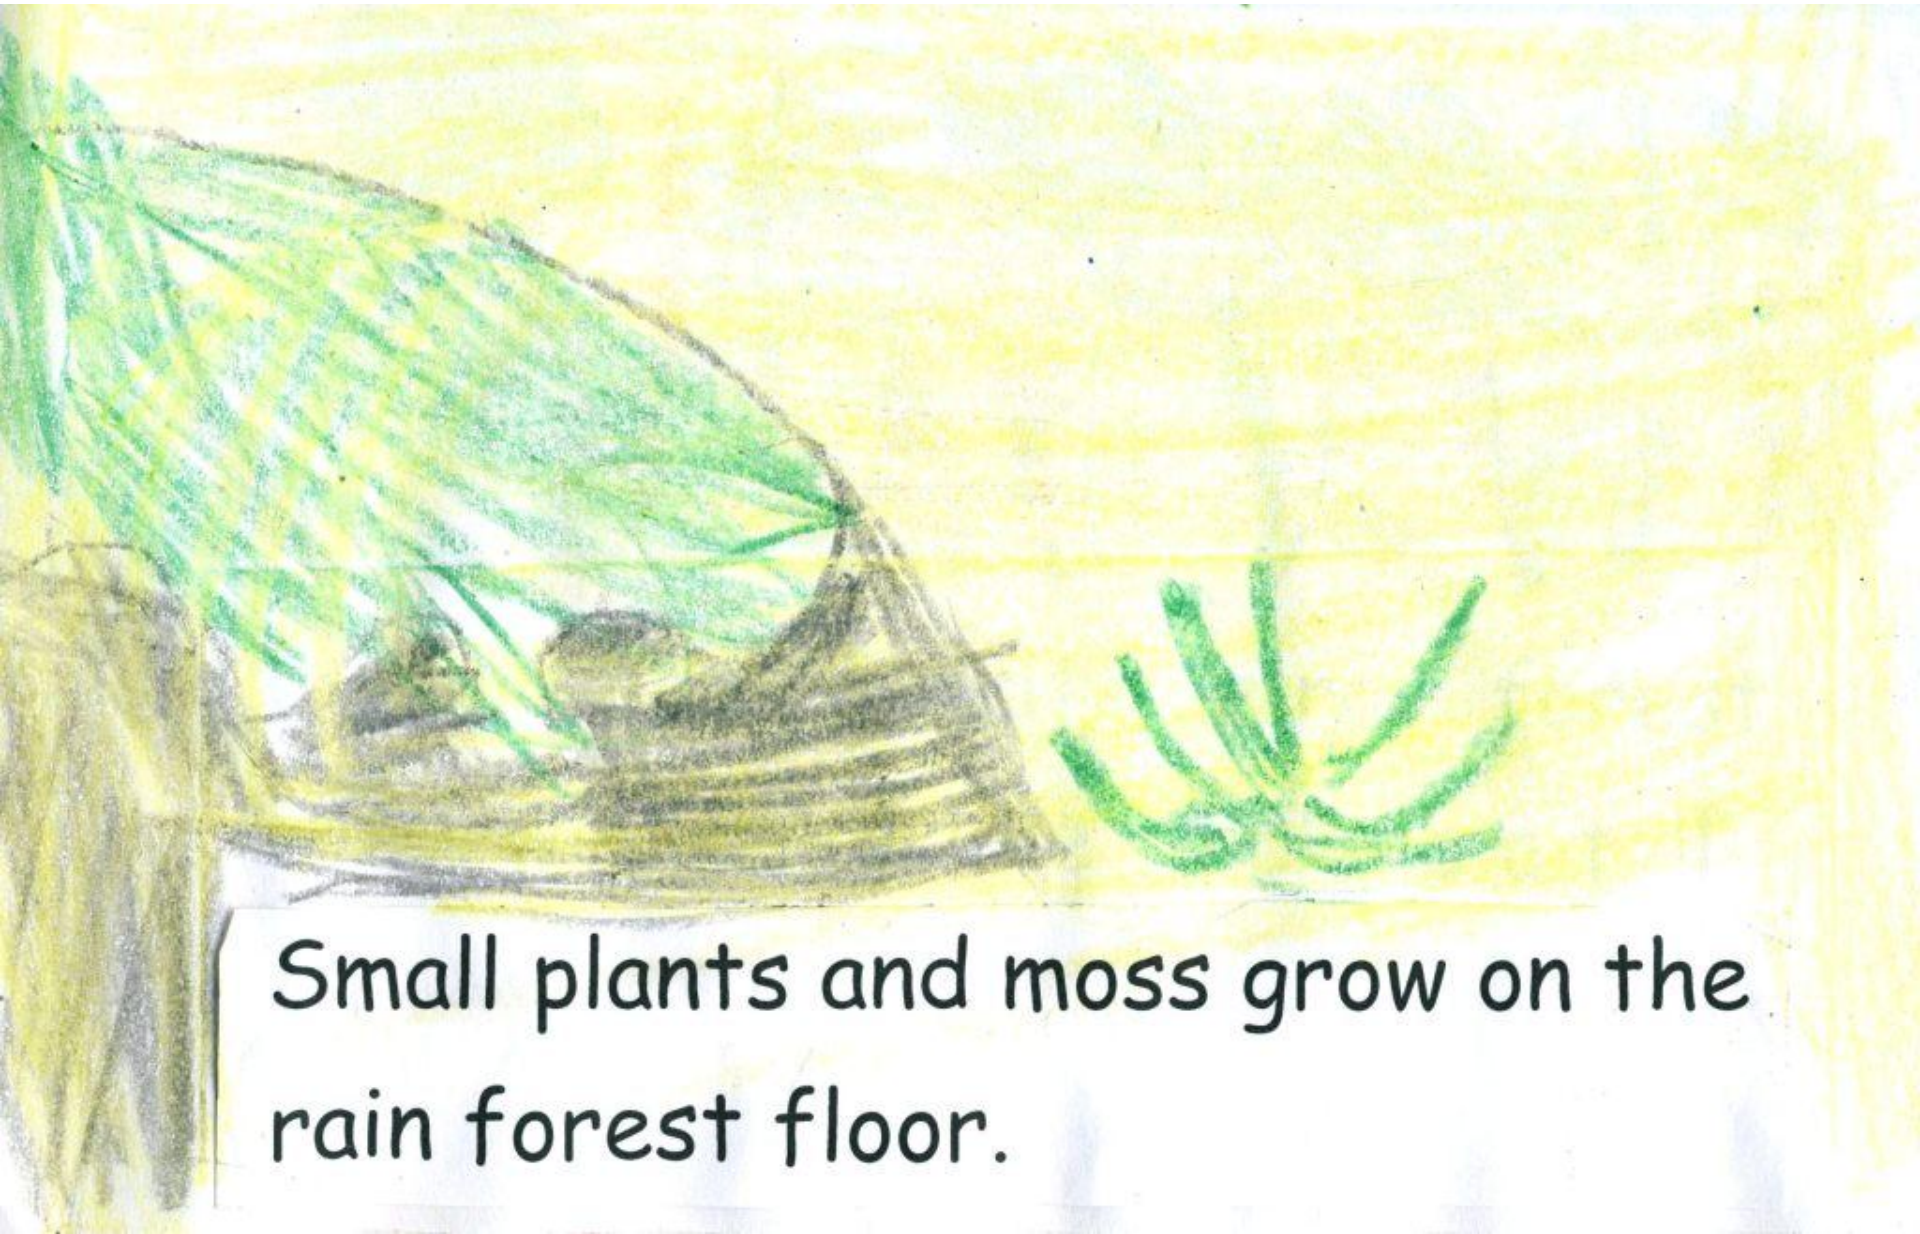

These giant trees grow to the top of the rain forest. These big trees get a lot of sunlight.

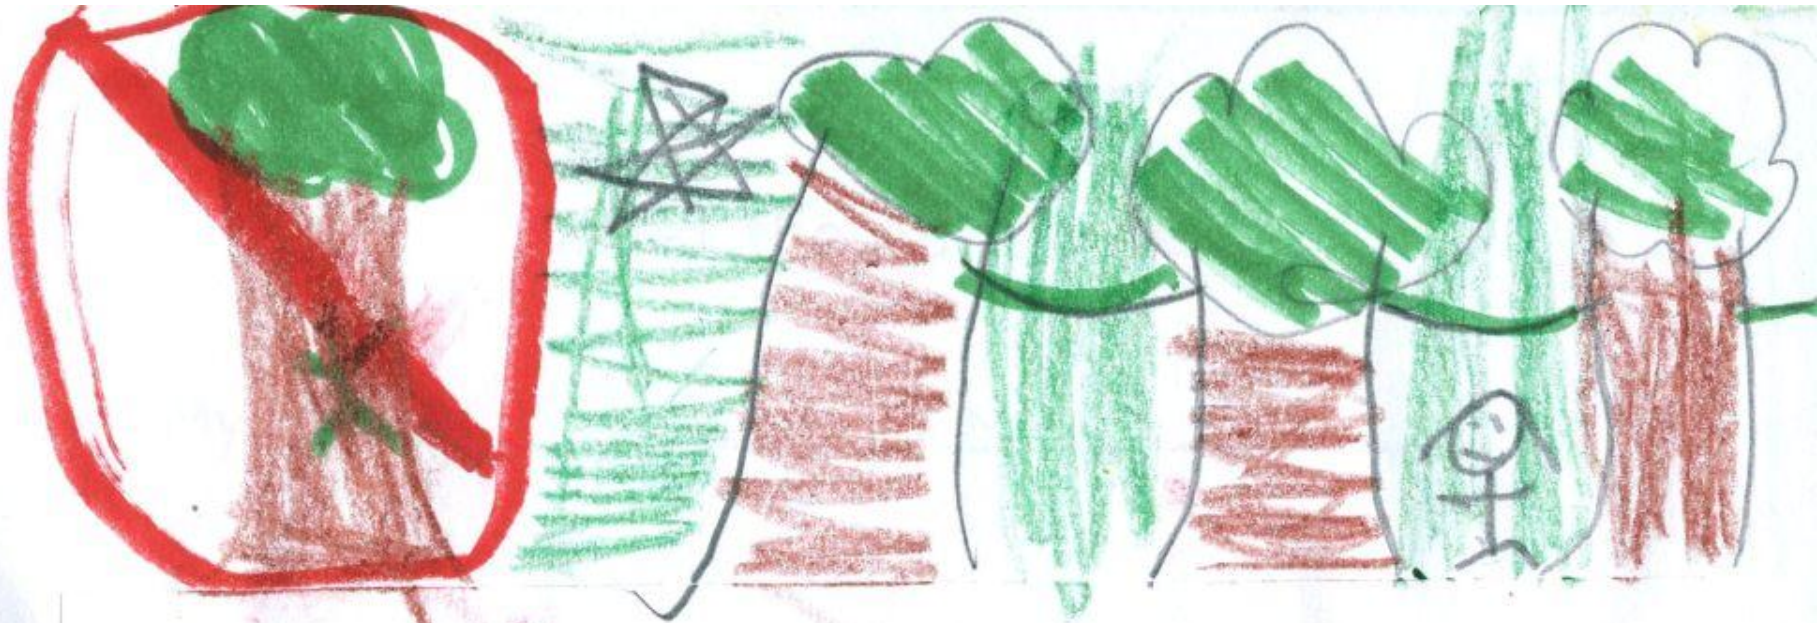

This tree has grown taller than all the plants. It gets more sunlight than any other plant.

This is the rain forest floor. Just a little sunlight gets to the rain forest floor because it is the last layer in the forest.

Small plants and moss grow on the rain forest floor.

I would like to visit the rain forest  
but I would not like to climb a tall  
tree in the rain forest! I think the  
rain forest is a cool place.
