Starfish

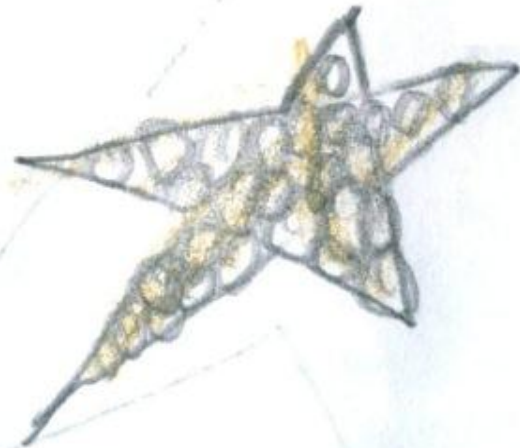

By Hayli

Starfish are called sea stars.

Starfish lay in the sea and fish swim above them.

Starfish have five arms. If they loose an arm, they can grow another one.

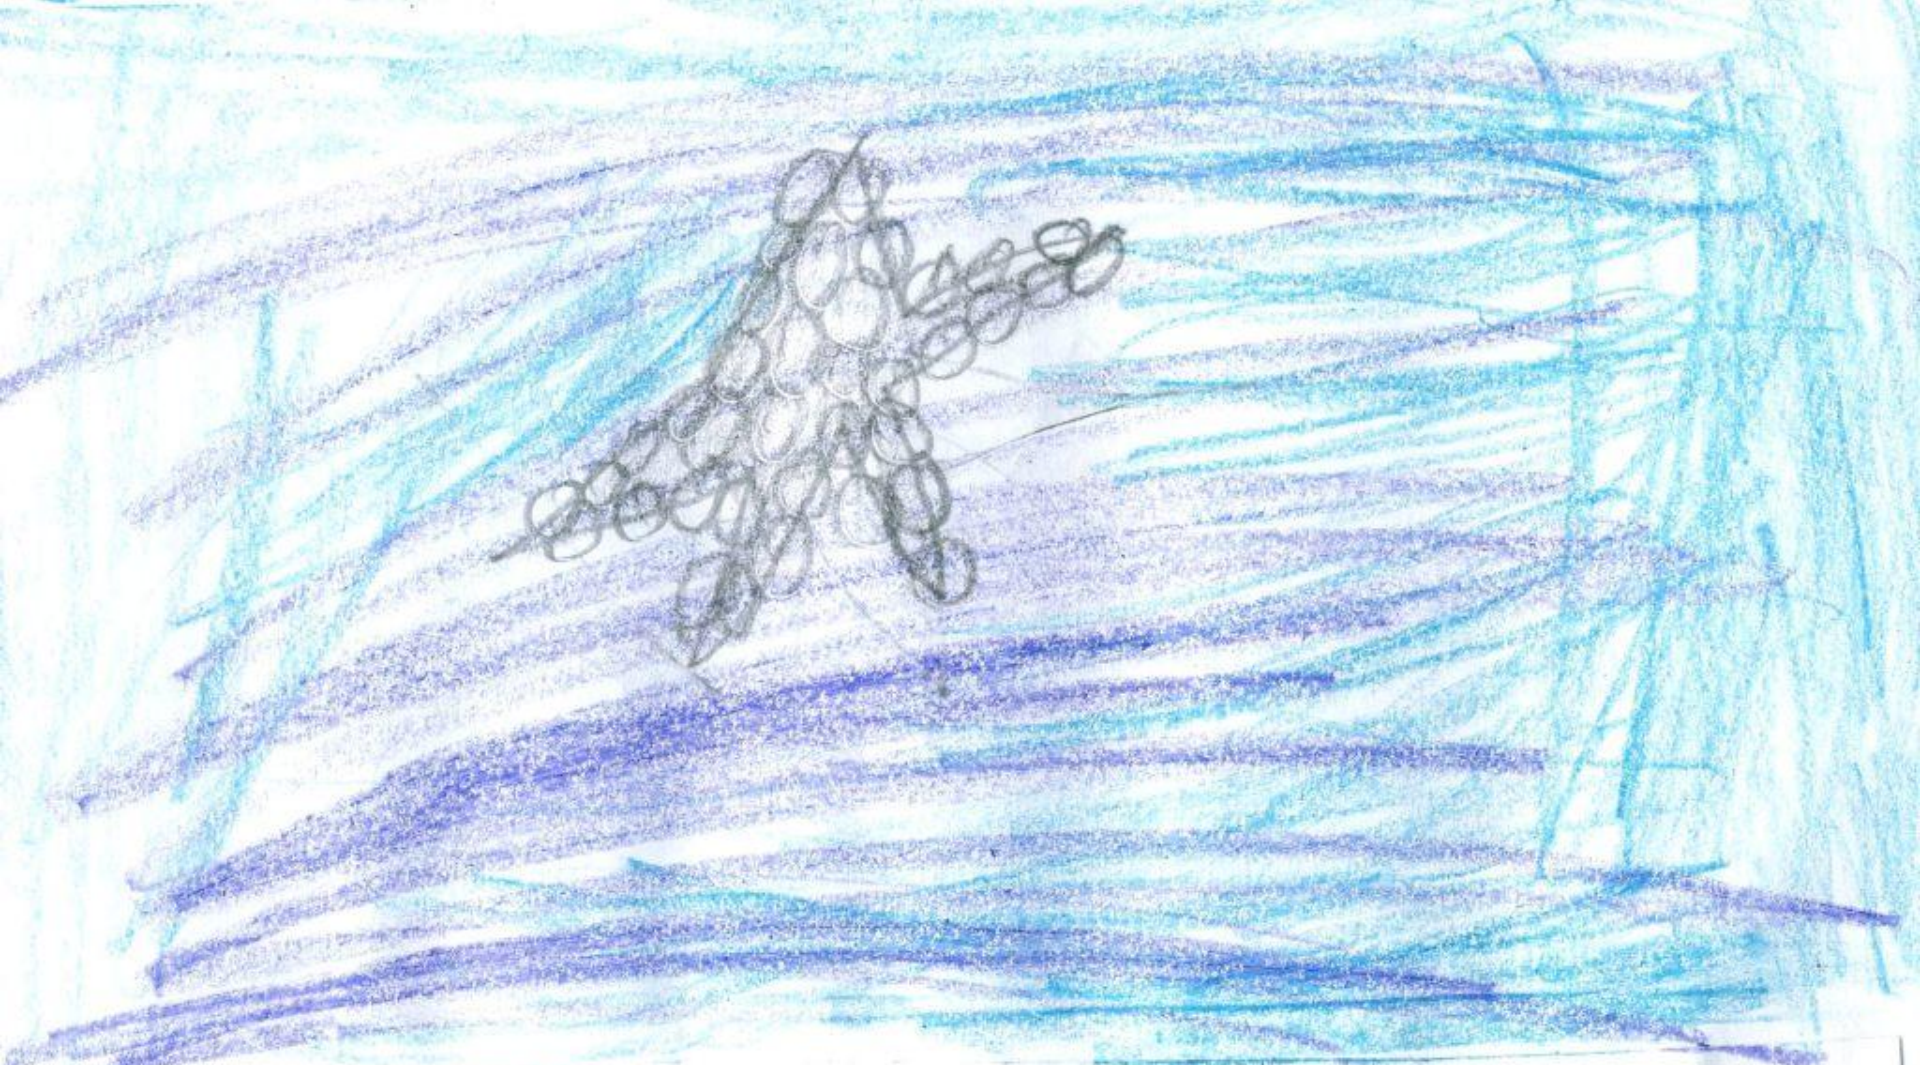

Each arm has suckers on it.

If a starfish is turned over, it can use its suckers to turn itself back.

They come in different colors and have sensitive skin.

Some look like they have little rocks on them.

I wish I could see some starfish so I could learn more facts about them.
